Backend engineer building and operating production systems — REST APIs, multi-tenant SaaS backends and applied AI pipelines. Strong with .NET, PostgreSQL, Docker and cloud infrastructure (GCP, Azure, OCI); hands-on with LLM integrations, RAG over vector databases and self-hosted agent infrastructure.

EXPERIENCE

Tech Lead & Full-stack .NET Developer HumanTech Software

01/2026 – Present

WebRRHHpro — Multi-tenant HR SaaS

- Architected and led development of a multi-tenant SaaS platform (.NET 10, Blazor Web App, PostgreSQL, Clean Architecture) with subdomain-based tenant isolation, RBAC and EF Core global query filters across 6 roles.
- Built an AI-powered document classification pipeline (OCR, field extraction, auto-categorization) and 3-mode digital signature workflows (OTP, click-to-sign, certificate-based), reducing paper-based HR processes by 95% and signature turnaround by 80%.
- Designed and operate production infrastructure on GCP with Docker, Caddy, GitHub Actions CI/CD, SignalR real-time notifications and Serilog structured logging with tenant-scoped observability.

Full-stack .NET Developer HumanTech Software

05/2025 – Present

WebCAEpro — Workforce management platform

- Built a GDPR-compliant digital signature workflow for monthly timesheet validation with SHA-256 magic links, audit trail capture and async PDF stamping — achieving 100% digital compliance.
- Designed a REST API for concurrent mobile time tracking with encrypted API keys, per-day operation limits and timezone-aware boundaries.
- Architected multi-brand support on a single codebase — 3 business brands with isolated databases, independent SMTP/WhatsApp channels and custom themes, resolved at runtime.

Software Engineer Correcto

05/2022 – 05/2023

- Built responsive web platforms with Angular and JavaScript in a fast-paced startup environment.
- Managed GCP deployments and collaborated in cross-functional teams using Jira and Agile/Scrum.

PROJECTS

Hermes Agent Infrastructure — self-hosted autonomous AI agent stack

2026 – Present

- Deployed and operate a 24/7 self-hosted AI agent stack (Hermes Agent, open-source by Nous Research) on Oracle Cloud ARM64 — Docker, systemd, Cloudflare Tunnel, ~\$5/month total cost.

- Integrated persistent semantic memory with self-hosted Mem0 + Qdrant vector database — cross-session retrieval via hybrid semantic + keyword search.
- Configured multi-model LLM routing (OpenRouter / OpenCode Go) with automatic fallback chains across ~20 providers, credential pools and rate-limit recovery.
- Set up cloud browser automation (Browser Use REST API), a multi-platform messaging gateway (Telegram, Slack) and cron-based scheduled automation with Kanban multi-worker orchestration.

EDUCATION

Full Stack Developer Program

09/2021 – 05/2022

Upgrade Hub

ES, Madrid

Higher Technical Certificate (ASIR) — Network Systems Administration

09/2018 – 07/2020

IES Fuengirola N°1

ES, Málaga

SKILLS

Backend & APIs: C# 14, .NET 8/10, ASP.NET Core, REST APIs, Entity Framework Core, Clean Architecture, Blazor Web App, background job processing, SignalR

Cloud & Infrastructure: Docker, GCP, Azure, OCI, Terraform (IaC), GitHub Actions CI/CD, Caddy, Cloudflare Tunnel, Linux/systemd, Serilog

Data: PostgreSQL, MySQL, SQL Server, Qdrant (vector DB)

Applied AI: LLM integrations, multi-model routing (OpenRouter), RAG with vector databases, semantic memory (Mem0), agent infrastructure, browser automation (Browser Use), AI-powered document classification (OCR)

Security: ASP.NET Identity, RBAC, JWT, digital signatures (OTP, SHA-256 tokens, certificate-based), audit trails, GDPR

LANGUAGES

Spanish (Native) **English** (Proficient)
