

Alex Rivera

Full-stack .NET Engineer — Cloud, Containers, Applied AI

hola@ejemplo.com | +34 600 000 000 | ejemplo.com

Madrid, Spain (open to relocation) | linkedin.com/in/usuario | github.com/usuario

PROFILE

Full-stack .NET engineer building and operating production systems end-to-end: solution and data-model design, ASP.NET Core and Blazor, container images published to GHCR, and cloud infrastructure on GCP, Azure and OCI with Terraform and CI/CD. Applied AI — LLM integrations and RAG — as a capability on top, not as the headline.

EXPERIENCE

Tech Lead & Full-stack .NET Developer 2023 – Present

Software company

Multi-tenant SaaS platform (Production)

- Architected a multi-tenant SaaS platform (.NET, Blazor, PostgreSQL, Clean Architecture) with subdomain isolation, RBAC and data-layer tenant filtering across six roles.
- Built document classification (OCR, field extraction) and three-mode signature workflows (OTP, click, certificate), removing most of the paper handling from the process.
- Designed and operate the production infrastructure: Docker images published to GHCR, CI/CD, reverse proxy, real-time notifications and structured logging.

Full-stack .NET Developer 2021 – 2023

Digital consultancy

Workforce management platform

- Implemented a GDPR-compliant signature workflow with signed links, audit trail and PDF stamping.
- Designed a REST API for mobile time tracking with encrypted keys and timezone-aware validation.
- Maintained a single codebase serving several business brands with isolated databases.

Software Engineer 2019 – 2021

Product company

- Built responsive web interfaces with JavaScript and Angular in an agile team.
- Supported cloud deployments and worked directly with product and support teams.

PROJECTS

Container delivery pipeline — Docker, GHCR and automated rollback 2024 – Present

Personal

- Multi-architecture images built in CI and published to a container registry, then released with Docker Compose behind a reverse proxy.
- Health checks used as the release gate, with automatic revert when a service fails after deployment.
- Pre-flight database backup and controlled migrations, so a rollback never needs a manual fix.

EDUCATION

Full Stack Developer Program — Technology school, Madrid 2020 – 2021

Higher Technical Certificate (IT Systems) — Network administration, vocational college 2017 – 2019

SKILLS

.NET Solutions	C#, .NET 8/10, ASP.NET Core, REST APIs, EF Core, Blazor, Clean Architecture, multi-tenant, RBAC, SignalR
Cloud & Containers	Docker, GHCR (container registry), Kubernetes (working knowledge), GCP, Azure, OCI, Terraform, GitHub Actions CI/CD, Linux/systemd
Data	PostgreSQL, MySQL, SQL Server, vector databases
Applied AI	LLM integrations, multi-model routing, RAG, semantic memory, browser automation, OCR document classification
Security & Docs	ASP.NET Identity, RBAC, JWT, digital signatures (OTP, hashed links, certificate), audit trails, GDPR

LANGUAGES

Spanish — Native English — Professional working proficiency
